

Scaling smart security: How Sine by Honeywell is redefining visitor and contractor management

Modern buildings and business environments are becoming increasingly complex, and disconnected systems can lead to inefficiencies, compliance risks and poor user experiences. To address growing expectations for safety, efficiency and compliance, businesses are adopting integrated, cloud-based solutions that combine access control with visitor and contractor management.

The evolving landscape of building access control

As businesses grow, managing access for contractors and visitors becomes more complicated, with facility managers balancing security and ease of use. Key trends shaping the access control industry include:

- **Market growth:** The global access control market is expected to grow 46% from \$10.4 billion in 2024 to \$15.2 billion by 2029.¹
- **Cloud-based solutions:** The cloud-based access control market is projected to rise 252% from \$40.2 billion in 2023 to \$141.7 billion by 2028.²
- **Regulatory compliance and data privacy:** Ensuring secure data handling is crucial for legal compliance.
- **Scalable solutions:** Systems must grow with operations and integrate seamlessly for optimal security and performance.

Modernizing building access control

Access control systems track and manage who can enter or exit a building or area on specific days or during certain timeframes. Traditionally, these systems have relied on physical keys, paper check-in logbooks, keycards or codes, but digital solutions are quickly revolutionizing the industry.

Modern systems seamlessly integrate access control and visitor/contractor management software, offering efficient, secure methods that enhance safety, increase operational efficiency, improve user experiences and support compliance needs.

Sine by Honeywell Visitor and Contractor Management software

Sine by Honeywell offers a smarter, more streamlined visitor and contractor management approach, integrating seamlessly with existing access control infrastructure to improve the user access experience and enhance safety and compliance.

Simplified processes

Streamlines visitor and contractor access, enabling quick entry and reducing unauthorized access.

Streamlined facility access

Simplifies entry processes to ensure quick access, reduce risk and fully comply with regulations.

Advanced security

Remote credential activation — including completing pre-arrival requirements — enhances security, while detailed audit trails ensure compliance and efficient reporting.

Future-proof integration

Sine by Honeywell integrates with various access control systems, supporting evolving security needs and growing businesses.

Regulatory standards

Pre-approval, real-time monitoring and audit trails ensure compliance and simplify reporting.

Integrated access control software solutions

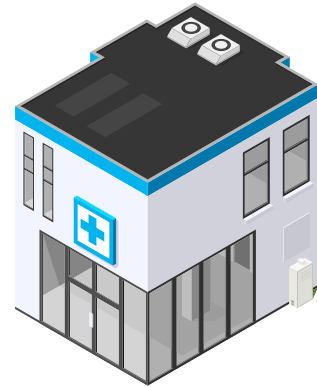

Sine by Honeywell integrates seamlessly with Honeywell's complete suite of access control solutions, including MAXPRO Cloud, Elements and Pro-Watch, providing scalable, secure and streamlined experiences for organizations of all sizes. Whether managing a single site or a global enterprise, these software integrations enable automated access provisioning, real-time monitoring and improved compliance, all within a unified visitor and security workflow.

1. Small business (Small, single-office building and multi-site retail)

MAXPRO Cloud (MPC) + Sine by Honeywell

Key features:

- **Cloud-based and easy to deploy** – Minimal IT setup with fast, secure installation.
- **Mobile-first management** – Control access, visitor and contractor check-ins from any device.
- **Integrated visitor access** – Automatically syncs Sine check-ins with real-time access provisioning.
- **AI-driven video surveillance** – Smart analytics and threat detection via Honeywell's Intelligent Command.
- **All-in-one monitoring** – Unified dashboard for managing doors, events and video from one platform.

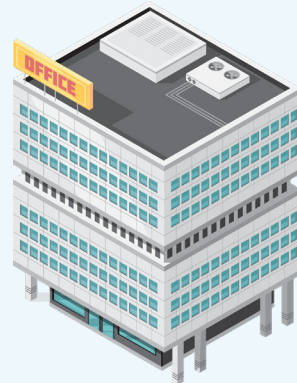

2. Mid-market (mid-sized office, education and preventative care)

Elements + Sine by Honeywell

Key features:

- **Modular, cloud-enabled security** – Combines on-premises robustness with cloud flexibility for remote access and management.
- **Scalable and growth-ready** – Suitable for growing organizations, with support for expanding teams, devices and locations.
- **Streamlined credentialing and identity management** – Create, validate and manage digital credentials with accuracy.
- **Integrated video surveillance** – Monitor and control multiple camera feeds directly within the access control system.

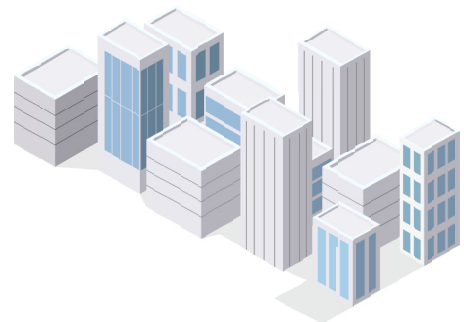

3. Enterprise (complex, multiple high-rises or corporate campuses)

Pro-Watch + Sine by Honeywell

Key features:

- **Enterprise-grade security and compliance** – Designed for large, high-security and regulated environments.
- **Highly customizable** – Tailor access rules, workflows and integrations to unique needs.
- **Multi-system and multi-site integration** – Centralize control across dozens or hundreds of locations.
- **Advanced credentialing and badging** – Supports secure ID issuance and complex authorization layers.

Conclusion

As organizations face an increasingly complex security landscape, the need for sophisticated, integrated access control solutions is critical. Escalating safety threats and evolving regulatory requirements demand systems that not only protect assets but also streamline visitor and contractor management while enhancing the user experience.

Sine by Honeywell stands at the forefront of this transformation. With its integrations and connected Honeywell ecosystem, Sine delivers a low-friction, high-impact upgrade for smart visitor and contractor management. Empowering businesses to scale their security infrastructure without compromising efficiency, compliance or user satisfaction, Sine by Honeywell is a comprehensive solution for today's and tomorrow's needs.
