

From delay to done: smarter contractor check-ins in action

When contractor compliance is manual, even quick tasks can turn into a slow grind - for your contractors, your team, and your day. Check-ins stall. Documents are missing. Keys are locked away. The job takes 45 minutes, but the process around it? That's the real time drain.

Same job, two very different days

Scenario: Maintenance task - e.g. A/C service or minor repair

	Manual day	Digital day
Onsite time	2 hrs 45 mins	1 hr
Admin effort	High (8 steps)	Low (2 touchpoints)
Job outcome	Delayed	On time
Staff impact	3+ people involved	Zero handholding

Over a year...

- If just 3 contractors lose 90 minutes each per week, that's 234+ hours of wasted time - and a lot of lost productivity.

When contractors are validated, inducted, and ready to go before they even set foot on site, everyone wins. You stay compliant. They stay productive. No bottlenecks, no paper trails, no awkward delays at reception. It's a better experience for your team, your contractors, and the job that needs to get done.
